

## Software Developer at Numatic International Ltd, Chard

Numatic International Ltd is the leading UK manufacturer of commercial cleaning equipment, creator of the famous Henry vacuum.

We are one of the largest local employers, our business is booming with year-on-year growth, and we are looking to recruit an exceptional Software Developer.

It is our ambition to continue to support our company's phenomenal growth by using technology to drive competitive advantage, and this is dependent on us continuing to build the very best technical team.

This is a fantastic opportunity for you to join our Information Technology and Digital Services Department. It is a unique chance to join a team that is undergoing technology transformation.

### About the role:

As a Numatic software developer, you will be responsible for configuring and integrating high quality software solutions across a variety of technologies within a primarily Agile delivery environment.

Reporting into the Development Services Manager the role will be varied and interesting, where you will design, engineer and test technical solutions in line with the agreed user stories. We are currently going through a period of change and as a result you will be involved with a broad range of projects and technologies supporting the business in delivering outstanding digital experiences for our customers and employees.

### What you will do:

- Design, code, configure, test, document and deploy high standard technical solutions.
- Participate fully in sprint planning, daily scrums and retrospectives.
- Design solutions that are efficient, sustainable, scalable, reliable and maintainable.
- Build seamless integrations of new/existing systems to eliminate potential problems and maintain data integrity.
- Peer review team outputs to ensure consistency across development team.
- Liaise with other IT&DS functions such as Architecture, Infrastructure & Security to ensure robust solutions.
- Contribute to the ongoing continuous improvement initiatives within the IT&DS department.
- Understand and promote software development and delivery best practices, such as Agile and SecDevOps.

### About you:

- An innovative and collaborative software developer.
- Have a proven track record of engineering solutions to a high standard.
- Ability to translate user stories effectively to technical solutions.
- Excellent communication skills to a broad range of stakeholders.
- Keep abreast of new and emerging technologies and ways of working.
- Build security into the heart of your designs.
- Experience with Agile practices.
- Working knowledge of object-oriented design, design patterns and SOLID programming principles.
- Experience developing clean solutions utilising Test Driven Development (TDD), and modern software principles and best practices such as MACH, SecDevOps and CI/CD.
- Experience with any of the following technologies C#/Java, SQL or PL/SQL, JavaScript, React, ReactNative.
- Have documented technical solutions using industry standard tooling.
- Preferably have experience with cloud-based architectures including Docker, Kubernetes, AMPQ and containerisation.

**Salary: Dependant on experience**
